

Le Havre Seine Métropole and 5 local authorities share their road information and increase their responsiveness with ViaPro

CONTEXT

Le Havre Seine Métropole, the port of Le Havre (HAROPA), the Seine Maritime département, the Interdepartmental Directorate of North West Roads, the motorway company SANEF and the Chamber ofcommerce of Seine Maritime have each their own data concerning road traffic, roadworks, bridge conditions, events and risks on each of the networks they manage.

SOLUTION

Nextérité provides its NextAlert artificial intelligence engine and its ViaPro hypervisor to filter and merge data from different sources in real time.

ViaPro displays disturbances in the area in real time and sends alerts to managers in case of an event with a strong impact on mobility. Particular attention is paid to the numerous bridges, management of environmental risks, as well as coordination of messages sent to citizens.

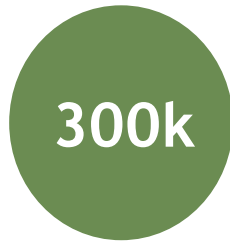

BENEFITS

Coordinated Authorities

Additional Information

Trucks per year

“Within the program Mobi Smart Port, ViaPro helps to smooth traffic and facilitate intermodality.”
Xavier Brière, Project Manager Smart Port City
