

The Réunion Region manages traffic information in real time and increases resident satisfaction with ViaPro and ViaFacil

CONTEXT

The Reunion Traffic Management Center (CRGT) is in charge of national roads on this island of 860,000 inhabitants. The road network, marked by the volcanic topography of this island, is key for people and goods circulation, mainly on the coast.

Volcanic and cyclonic risks add up to make road maintenance and traffic management particularly important for economic development and human safety.

SOLUTION

Nextérité provides La Réunion with the ViaPro collaborative information and mobility portal, which displays all road information and public transport data in real time: disruptions, speed per section, cameras, stops and weather prediction, as well as weather and environmental alerts.

The general public ViaFacil application integrates most of the information managed by ViaPro and adds a multimodal travel engine, therefore promoting modal shift towards public transit.

BENEFITS

Use of Public
Transportation

Nb Accidents
per year

Decrease in
Road Fatality

“Our mission: to offer totally secure roads to Reunion Islanders.”

Huguette Bello, president of Réunion Region
