nextAlert®

Promote modal shift with reliable real-time information

- Many residents prefer using cars for their commutes.
- But the cost and CO2 impact are becoming too high.

- NextAlert promotes modal shift through real-time information on bus and tram arrival times, based on their location, traffic conditions, and semantic analysis of messages.
- The service easily integrates with existing apps and calculators.

- The information provided is transparent and twice as comprehensive.
- Residents' trust in public transport is strengthened.

Fast Implementation

Cost-Effective
